May regulate T-cell activation.
-!- SUBUNIT: Associates with p56-lck (By similarity).
-!- SUBCELLULAR LOCATION: Type I membrane protein.
-!- SIMILARITY: Contains 3 immunoglobulin-like C2-type domains.
-!- SIMILARITY: Contains 1 immunoglobulin-like V-type domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Fonsgaard A., Hirsch V.M., Jöhnson P.R.;

"Cloning and sequences of primate CD4 molecules: diversity of the cellular receptor for simian immunodeficiency virus/human immunodeficiency virus.";

Eur. J. Immunol. 22:2973-2981(1992).

-I- FUNCTION: Accessory protein for MHC class-II antigen/T-cell receptor interaction. May regulate T-cell activation.

-I- SUBUNIT: Associates with p56-lck (By similarity).

-I- SUBCELLULAR LOCATION: Type I membrane protein.

-I- SUMILARITY: Contains 3 immunoglobulin-like C2-type domains.

-I- SIMILARITY: Contains 1 immunoglobulin-like V-type domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This SWISS-PROT entry is copyright. -i- FUNCTION: Accessory protein for MHC class-II antiger receptor interaction. May regulate T-cell activation receptor interaction. May regulate T-cell activation.

-i- SUBGINIT: Associates with p56-lck (By similarity).

-i- SUBGILIULAR LOCATION: Type I membrane protein.

-i- SUBGILIULAR LOCATION: Type I membrane protein.

-i- SIMILARITY: Contains 1 immunoglobulin-like V-type d.
                                                                                                                                                                                                                         Glycoprotein; Immune response; Palmitate; Repeat; Signal; T-c

"Cloning and sequences of primate CD4 molecules: diversity of the cellular receptor for simian immunodeficiency virus/human immunodeficiency virus.";

Bur. J. Immunol. 22:2973-2981(1992).

FUNCTION: Accessory protein for MHC class-II antigen/T-cell receptor interaction. May regulate T-cell activation.

1. SUBCRIATIAN ACCOMINON: Type I membrane protein.

1. SUBCRIATIAN COCATION: Type I membrane protein.

1. SUBCRIATIAN: Contains 3 immunoglobulin-like C2-type domains.

1. SIMILARITY: Contains 1 immunoglobulin-like V-type domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CONFLICT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             181
                                                                                                      T4 is a member of the immunoglobulin supergene family. The T4 mR1 encodes contiguous V- and J-like elements without the requirement for DNA recombination events. The V-like domain can be found at positions 145 to 426 and the J-like domain from 427 to 471. The Typrotein may serve as the specific surface receptor for the AIDS
                                                                                                                                                                                   Unpublished (1986)

                          With the revision of the nucleotide at position encoded by 151-153 becomes lysine. This is now first residue in the mature protein [2].

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SCD4-SCFv(17b) is a neutralising bispecific fusion protein capable of CC binding to two sites of its target protein. The protein comprises a first CC binding domain capable of binding domain side on the target protein, a second binding domain capable of forming neutralising complex CC with an induced epitope of the target protein and a linker connecting the CC contealing domains. SCD4-SCFv(17b) comprises a soluble CD4 fragment CC (contealing domains D1 and D2) fused to a single chain Fv portion of CC mimetic is used for inactivating 9p120 protein of HIV, and for CC neutralising HIV. It is also used for blocking and preventing the binding CC fit he viral or recombinant 9p120 protein to soluble CD4 or lymphocyte CC D4 and for inhibiting HIV replication. The chimeric proteins is CC therefore useful for treating HIV infection and also AIDS. It is are particularly useful in the prevention of infection during or immediately after HIV exposure (e.g., mother/infant transmission, post-exposure CC resistance to HIV infections and AIDS. Gene therapy is used to secrete CC the bispecific protein at mucosal surfaces, such as the vaginal, rectal CC reactive with neutralising antibody with high in vivo activity and no Fc-mediated undesirable targetting properties. When the fusion protein is CC substentially derived from human proteins. When the fusion protein is CC and toxicity in humans which is of great value in prevention of infection of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an immunogenic complex comprising gp120 covalently bonded to a CD4 equivalent molecule, fragment of CD4 or its equivalent. The invention also relates to a composition comprising the complex and a carrier, an antibody reactive with the complex, an immortalised cell line that produces the complex, a method of detecting the HIV antigen in a test fluid, involving contacting the test fluid with an antibody raised against the immunogenic complex and detecting the presence of immune complexes formed between the antigen in the test fluid and the antibody, and a vaccine comprising an immunogenically effective amount of the immunogenic complex. The immunogenic complex is useful for raising neutralising antibodies against HIV, which involves administering the complex to a subject in a carrier, and for treating HIV infections. This sequence represents expression vector DNA used in the scope of the

The fusion proteins contain an oligomerisation domain that enables the proteins to bind to one another to form oligomers. The oligomers may be used in an invention relating to a method for screening for compounds with the ability to inhibit a low affinity receptor-ligand interaction. The method uses an interfacial optical assay, such as surface plasmon resonance (SPR). The method is useful for screening candidate compounds for the ability to inhibit interaction between MHC/peptide complex and T cell receptor, and MHC/peptide complex and CD8 or CD4 co-receptor. The compounds identified by the above methods which interfere with T cell receptor binding to a particular HLA type molecule are useful as immune inhibitors for treating carcinomas, autoimmune diseases such as multiple sclerosis, human immunodeficiency virus (HIV) infection, rheumatoid arthritis, Hashimoto's disease, insulin dependent

resulting in HIV-1 retention in the ER and thereby preventing viral replication. In a specific embodiment, the chimeric CD4 molecule comprises CD4 fused to 15 amino acids of the C-terminal domain of the T cell receptor CD3epsilon chain; this chimeric CD4 molecule is designated CD4epsilon15 (ADA44807). A known chimeric CD4 of similar structure but containing only 10 amino acids from CD3epsilon can also be used. Compositions of the invention have an in trans effect on the replication of HIV-1, and may be used to treat and prevent HIV-1 infection. The present sequence represents a DNA encoding the chimeric CD4 molecule CD4epsilon15, which is specifically claimed for use in compositions of
                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a composition for the treatment or prevention of human immunodeficiency virus-1 (HIV-1) infection. The composition comprises CD4+ cells that have been transduced with a vector that encodes a chimeric CD4 molecule which is capable of being retained in the endoplasmic reticulum (ER). The invention also encompasses the use of a soluble protein factor produced by CD4+ cells that have been transduced with a vector encoding a chimeric CD4 protein; and the use of an expression system encoding a chimeric CD4 protein. The ER-localised chimeric CD4 molecule binds to the HIV-1 envelope protein gp160,
                                                            invention.
